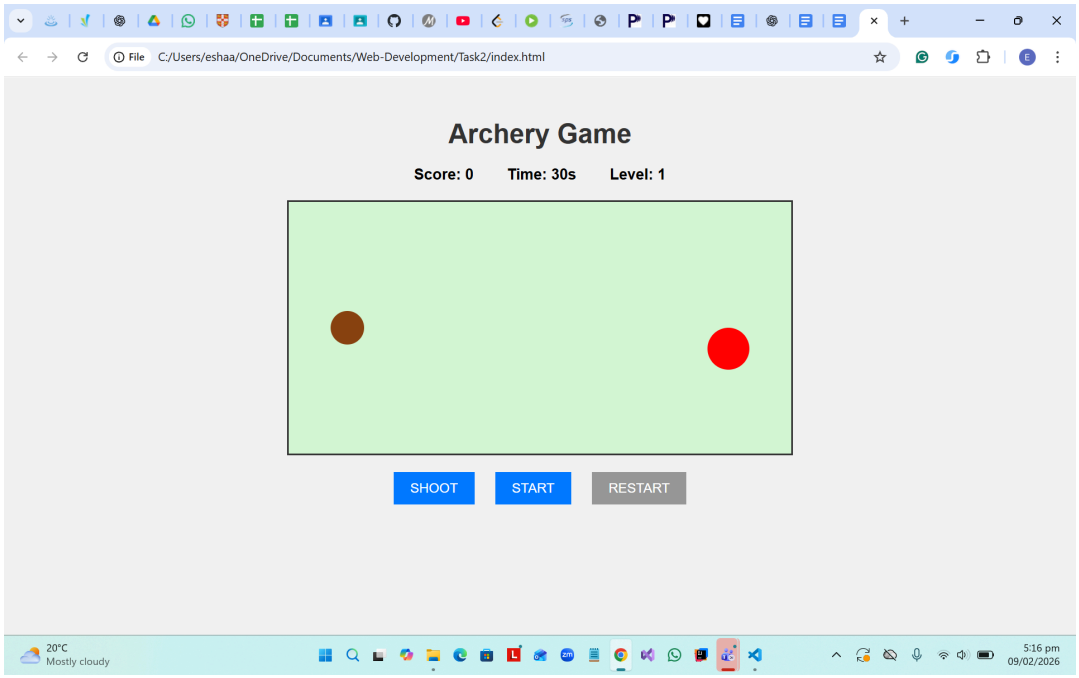
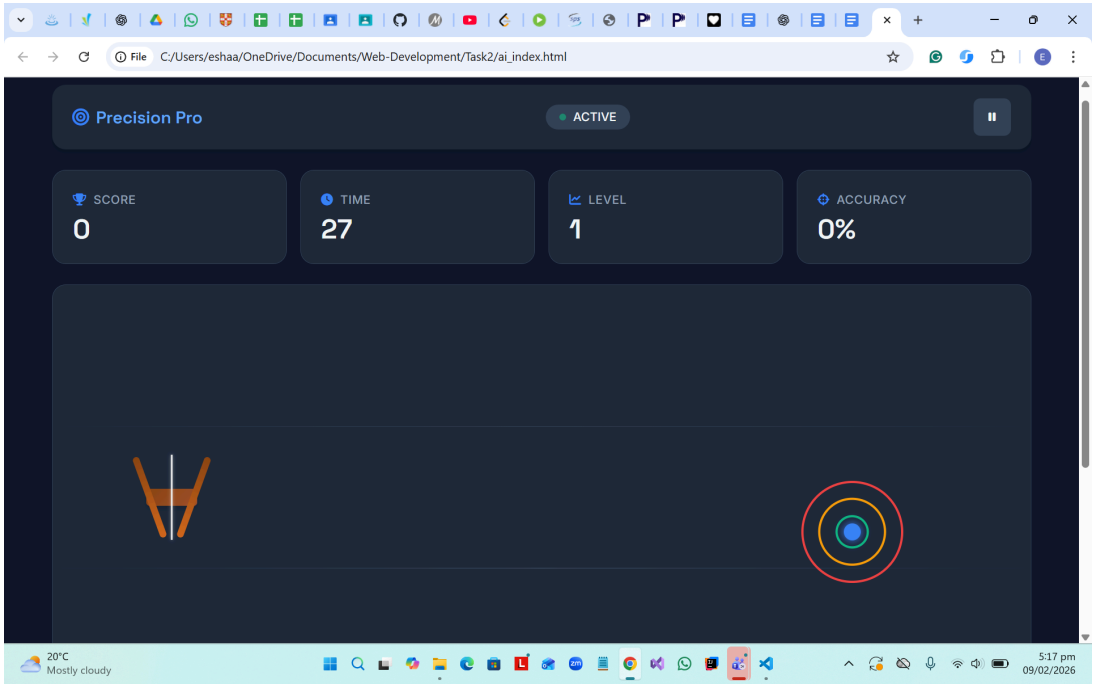
Web Development Task2 Reflection

By: Eshaal Malik, 23I-0732

Manually-created website:



AI-prompted website:



Prompt Used for the AI-Generated Website:

Create an interactive, browser-based Archery Shooting Game using HTML, CSS, and JavaScript.

The game should include a visually appealing and responsive user interface, animated bow and arrows, and a vertically moving target with increasing difficulty.

Implement game states such as start, pause, resume, and game over, along with a timer, score tracking, accuracy calculation, and level progression.

Use modern CSS for styling, including gradients, transitions, and animations, and JavaScript for handling game logic, collision detection, and real-time updates.

The final result should feel polished, engaging, and suitable.

Analysis & Comparison

What Was Observed

The AI-generated archery game was more visually polished and interactive than the manually created version. It included smooth animations, better layout structure, and additional features such as accuracy tracking and game states. The overall experience felt more professional and engaging.

Differences Between the Two Versions

The manual version focused on basic layout and functionality, making it easier to understand for beginners. The AI version, however, included more complex layouts, modern styling, better spacing, and additional content. This made the AI version more visually engaging, aesthetic, and polished.

What Was Learned

This comparison showed how HTML, CSS, and JavaScript can be used to build both simple and advanced web games. Manual coding improved understanding of core logic, while AI-generated code demonstrated better UI design and structure. AI can be a helpful learning tool when used alongside manual development.
